## VIEWS AT GREEN & HUNTER BRICK CO.'S PLANT.

GREEN & HUNTER BRICK CO.'S PLANT.—GENERAL VIEW LOOKING EAST.

THE object of the Journal in issuing this illustrated edition this week is to place before the people of this State, and the public generally, at the Texas State Fair and Dallas Exposition, and the Taylor County Fair, the excellent facilities of the Green & Hunter Brick Company for manufacturing fine pressed brick. This plant is the largest of the kind in the South, its capacity being over 75,000 brick per day. A large plant is now nearing completion for the manufacture of vitrified brick for street paving. The quality of shale, the material used, has been proved to be the best yet discovered for making this variety of brick, and the Company will soon be prepared to furnish them in any quantity.
